

I am an over the road truck driver, I am away from my home twice a month, and spend all my time on the road. XM Satellite Radio has made my life out here much easier, and do not change XM's programming. The local content they use in there programming makes my driving easier, and safer. When driving through a new city. XM saves me the time of turning the dial to find out where the next traffic jam maybe, and even if I do find a channel that provides this information. I have to wait to the bottom or top of the hour to hear it. With XM I know the channel, I here it right away and then back to my COMMERCIAL FREE RADIO.

If this organization (NAB) National Association of Broadcasters thinks they are helping drivers then there not. What about drivers like me that do not know the radio dials by heart. In my opinion XM keeps drivers driving, and not searching the dial. LEAVE XM ALONE, there only helping drivers like myself. Don't ruin a good thing.
